

QUALITY MANAGEMENT FOR MANUFACTURERS

THE EASIEST QMS

**Control isn't
supposed to be
so complicated.**

The easiest QMS to stay in control.

CUSTOMER VOICE

You can link processes directly to product output. That is where AlisQI scores, because in other systems, the two are not linked at all.

| LAMERTS HTS

AlisQI[®]

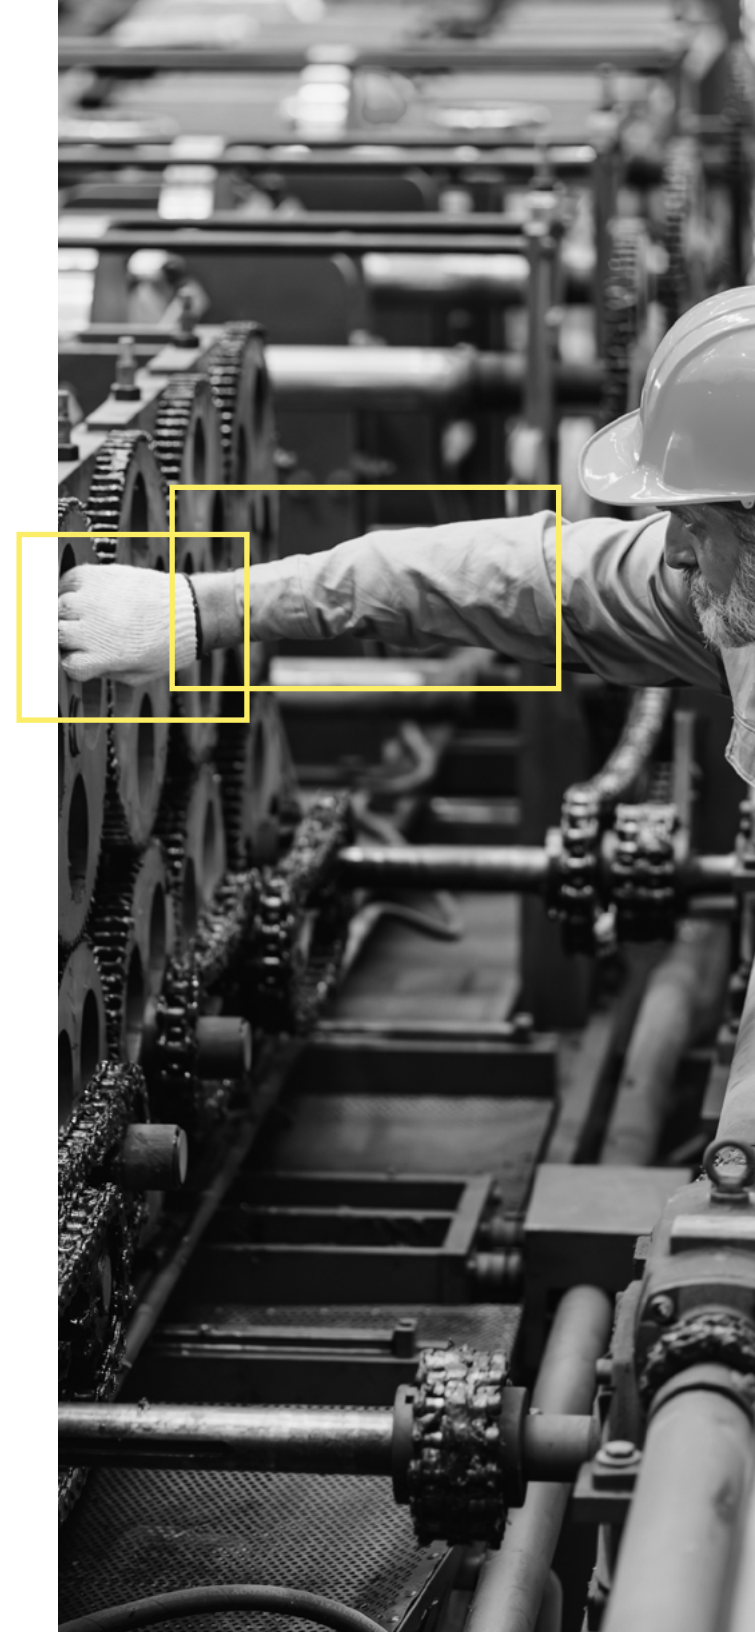

Growth shouldn't mean losing control.

In fast-growing factories, success hides the loss of control. Until failure doesn't.

Manufacturers who've outgrown spreadsheets use AlisQI to stay in control as they scale.

It captures quality events, process variation, and supplier performance where work actually happens – so problems surface early, not after they've compounded.

No firefighting. No normalizing failure. Just structured follow-up that closes the loop, every time.

Control where it counts. Visibility where work happens.

Most quality systems reflect how work should happen. When reality diverges, signals arrive late and problems land downstream. AlisQI's Solvers put quality data where you need it: audit-ready, actionable, and live. Built around how you actually work. No heavy IT project required.

Start where it hurts most.

Adapt to your operational reality – Configurable without heavy IT projects		
Solve your most pressing quality challenges

Every team. No silos. Forms Workflows Data model Reporting Security Integrations

“If you wanted to know something – certain data of a production line – it took an absolute age but now with AlisQI it’s two clicks and you have your graph.”

| Berry Global

**The metrics look fine.
The operation isn’t.**

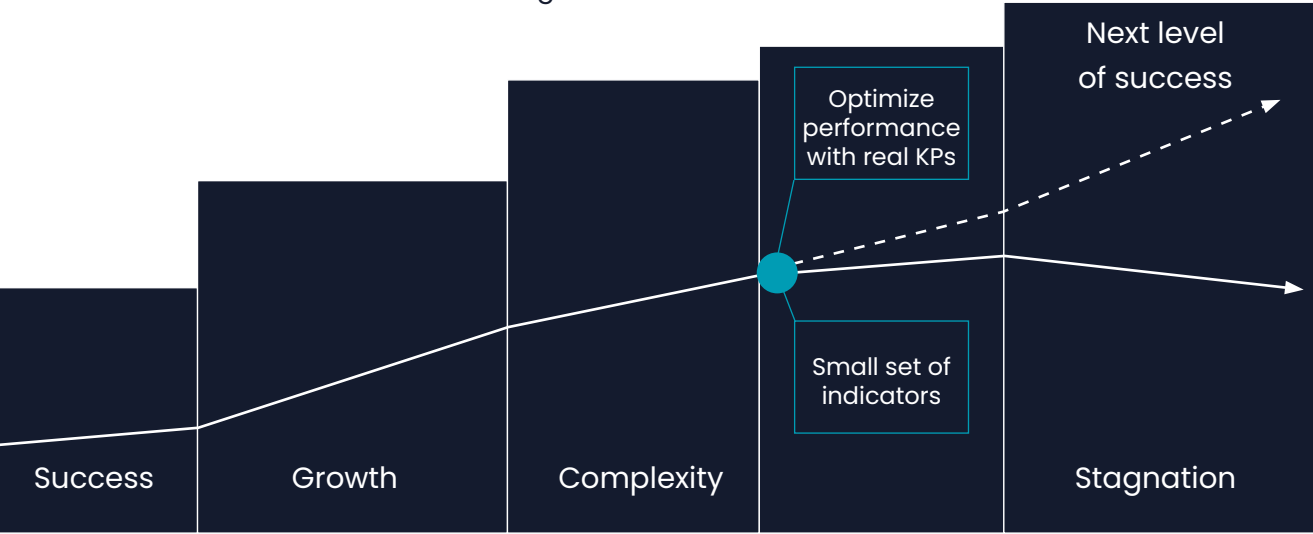

When complexity grows, most teams narrow their focus; deviations closed, CAPAs completed, audits passed. It feels like control. It isn’t.

Those indicators only show what’s easy to measure. Optimizing them creates the impression of control. Meanwhile, variability, rework, and recurring issues keep building elsewhere.

**Get back in control.
Without tearing everything apart.**

AlisQI is built for manufacturers that can’t afford a disruptive overhaul, but can’t afford to stay where they are either.

Get it under control. Then extend that control outward, process by process, until firefighting gives way to predictable daily execution.

AI that earns its place.

AlisQI embeds AI directly into quality workflows. Not bolted on, not decorative. When all your quality data lives in one place, AI can do what it's actually good at: surfacing patterns, reducing manual work, and helping your team make better decisions faster.

Configuration:
Forms built in minutes

Detection:
Deviations caught earlier

Insight:
Answers without waiting for a report

The result: quality professionals who spend less time chasing data and more time acting on it. AI that makes your team sharper, not one that replaces their judgment..

*Every AI feature is off by default
and gets switched on deliberately.*

**Because control isn't something
you hand over.**

CUSTOMER VOICE

Having everything in one place is a game-changer. It saves hours every week and improves how we work across teams.

| EUROFAST

AlisQI[®]

Quality Management Software

**Built for manufacturers who
can't afford to lose control.**

Manufacturers across food & beverage, chemicals, plastics, packaging, and other batch manufacturing operations rely on AlisQI to manage quality as their operations grow in scale and complexity.

Production teams, quality managers, and plant leaders across the world use it to keep control visible as processes, products, and regulations evolve.

**Fits your stack.
No workarounds required.**

AlisQI integrates directly into your existing systems. Not alongside them. Not as a separate quality silo.

Open, secure connections with ERP, MES, LIMS, instruments, and BI tools mean quality data flows where it needs to go. No manual re-entry. No brittle fixes.

You decide what to connect and how deeply. Your data stays yours. Quality insight stays grounded in the same operational reality.
