LOWLANDER

A photograph of a brewery with people socializing and a presentation screen in the background. The scene is dimly lit with a warm, reddish-orange glow. In the center, a group of people are engaged in conversation. To the right, a man in a dark blazer is holding a pack of beer. In the background, large stainless steel brewing tanks are visible. On the far right, a presentation screen displays a list of bullet points and the 'ecovyst' logo. A black text box with white text is overlaid at the bottom left of the image.

What's new on AlisQI

NEW March 04, 2024

Add custom links to text fields

Today we released a new feature to text fields: enabling users to add links to text field. This extends the linking capabilities of the [set relations](#), because the new link feature supports arbitrary links.

With this new feature you can add links to any (filtered) result overview, document feature within the application, or even external resources.

Links are enabled for both manual text fields as well as calculated text fields. Calculated fields you can use all the power of the expression engine, including all the function and result values.

Links are defined using the markdown notation:

```
[link text](url)
```

Dynamic variables in links

These links can be used in any text field, including [calculated text fields](#). This allows you to use variables and filters from the expression engine in creating the links. This can be particularly useful when you want to include a dynamic result identifier

I genuinely want to know what do you do to continue to fuel your passion in the [somewhat discouraging] world of quality assurance in manufacturing. I joined QA right out of college knowing nothing about quality except some college recruiters that came and talked about how great the job is and you are keeping the lid on it for the sake of your career path. That was 8 years ago, I have progressively become more and more passionate about it. I constantly have to play the "bad cop" (probably like many QA professionals) to keep our process and product safe. It's difficult to think about millions of good quality shipments we have made when Quality is one of the most underappreciated roles in the industry. Customer Service, a hugely underappreciated role). Over the years, I watched my colleagues in Operation and Sales get recognized for all the successes and recognition. Yet when there are problems, Quality names will be first to come up. Some time I joke with people that I wish people would call me up and tell me how great the products are instead of just calling me when products are not up to standard. Of course, Sales get those positive calls. Sorry if I sound like I am complaining, I understand the importance of the role and regardless of how I feel about the role, I will continue to do what I need to do to keep our product safe. I just want to see what other people on here do to continue to love what you do. I know changing career is an option but I want to do everything I can before considering that option especially I have already invested almost 10 years in this.

"I constantly have to play the bad cop to keep our process and product safe".

Lack of leadership support

In many businesses, quality is still not seen as a mature business function.

This impacts the culture of quality.

As a result, quality and the business' long-term success is at stake.

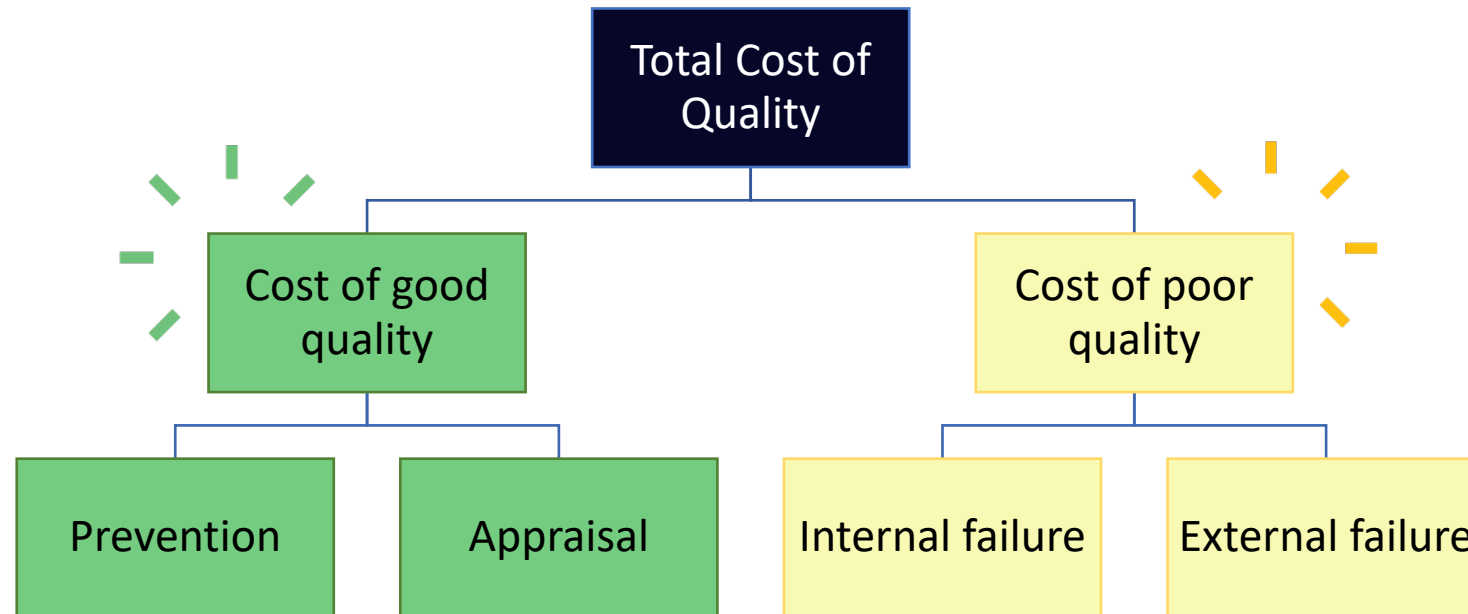

How to convince Leadership?

- Culture starts at the top.
- It's our job to convince leadership.
- Business leaders speak the language of \$\$\$.
- We need to translate quality operation in \$\$\$.

Total Cost of Quality

- Quality assurance
- Quality audits
- Quality and production staffing
- Corrective action program
- Education and training
- Continuous improvement efforts
- ...

- Inspection
- Quality audits
- Acceptance testing
- Material testing
- Quality and production staffing
- Calibration of tools/equipment
- ...

- Rework
- Scrap
- Corrective action process
- Disposal costs
- Rework of supplier rejects
- Re-testing
- ...

- Customer returns
- Complaints in warranty
- Product recalls
- Replacement product
- Customer complaint processing
- Shipping costs
- ...

How to Quantify?

- $Cost = n * p$
- n is easy
- Keep p simple

Examples

Complaint handling

$\$ = \text{Number} * \text{Std. price per complaint}$

Lost opportunity

$\$ = \text{Reduction} * \text{Sales volume}$

Supplier Corrective Action Requests

$\$ = \text{Number of SCARs} * \text{Std. price}$

Examples (cont.)

Quality Manual reading

\$ = Time spent reading * Hourly rate

Controlled documents management

\$ = Number of revisions * Std. price

Unused capacity

\$ = Number hours stand still * Margin

Easy does it

- $Cost = n * p$
- n is easy
- Keep p simple

- Guestimate and iterate
- S / M / L
- $Cost = (n * p) + \text{direct costs}$

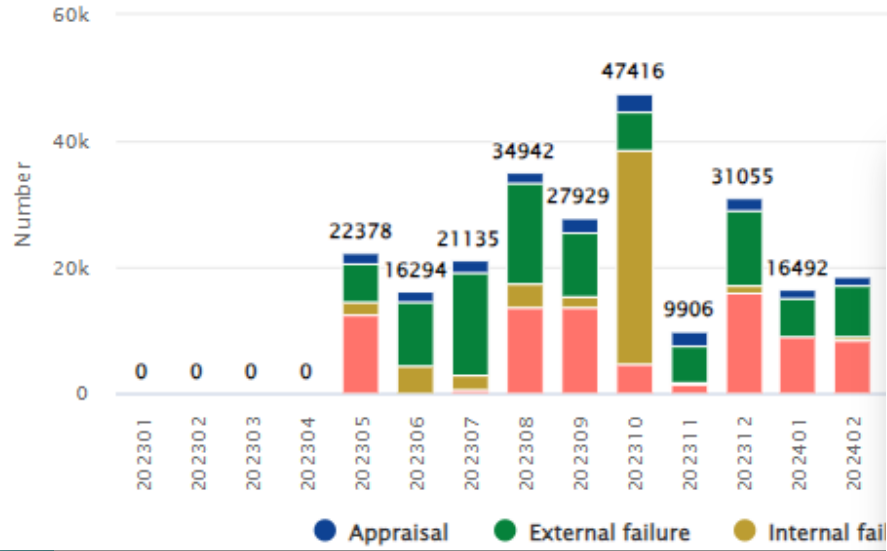

**Automate
the heck
out of it!**

From Cost of Quality to Culture of Quality

Culture of Quality

*“Culture eats Strategy
for Breakfast”*

Peter Drucker

AlisQI ✨

What is a Culture of Quality

Culture of Quality is the set of shared values, attitudes and standards, established by leaders, that form the behavioral foundations for an optimized work environment.

Why do I care?

Because:

- Culture of Quality = Good Quality
- Good Quality = Good Business
 - Revenue ↑
 - Cost ↓
 - Profit ↑
 - Customer Satisfaction ↑
 - Waste & Rework ↓
 - Employee Satisfaction ↑

Warning signs of a Weak Culture of Quality

- Heroics, hustling and hard work save the day.
- Quality is rarely discussed, except if there is an issue.
- Lack of organizational pride, poor job satisfaction.
- Difficult to implement improvements.

Evidence of a strong Culture of Quality

- Quality is a common topic of discussion, especially leadership.
- Quality is measured, information flows freely.
- Problems are discussed and improvements come naturally.
- High job satisfaction & organizational pride.

What are the key tenets of Culture of Quality?

- 
1. **Ownership** - hold each other accountable for outcomes, good or bad.
 2. **Awareness** - collect and share relevant quality information so performance is transparent.
 3. **Involvement** - responsibility is shared, Quality is everyone's responsibility, not just of Quality team.
- 

How to Create a Culture of Quality?

1. **Ensure leadership commitment and role modeling.**
2. **Communicate consistently that “Good Quality is Good Business”.**
3. **Monitor and discuss quality metrics**
4. **Implement training and development for employees.**
5. **Encourage periodic employee feedback.**

How to convince Leadership?

- It's **our job** to convince leadership.
- Business leaders speak the **language of \$\$\$**.
- We can translate quality investments to returns (\$) using an **ROI as your 'Rosetta Stone'**.
- An ROI shows that **"Good Quality is Good Business"**.

Agenda

- ✿ 1:00-1:30 PM Short introduction and company update (Otto de Graaf)
- ✿ 1:30 -2:00 PM Cost and Culture of Quality (Gerben de Haan, Nils Nugteren)
- ✿ 2:00-2:30 PM Coffee break

- ✿ 3:00-3:30 PM QC and Production Partners, Malcolm McLean, edilon)(sedra
- ✿ 3:30-4:00 PM Coffee break
- ✿ 4:00-4:30 PM Workshop Sustainability and Supply Chain Management
- ✿ 4:30-5:00 PM AlisQI roadmap (Gerben de Haan)
- ✿ 5:00-5:15 PM Closing (Otto de Graaf)
- ✿ 5:15-6:00 PM Beer tasting and networking

QC & AlisQI

1. Organising our QC

QC is organised into 3 Main Categories

1) Chemical Products (VP Articles)

38 QC Forms

Produced in Haarlem until 2019

Corkelasts®, Jointelasts®, Primers & Dex 2 Epoxies

2) RPU Foams – Trackelast (VH)

Trackelast Mats, Rail Strips, Rail Clamping Strips, Base Plate Pads,

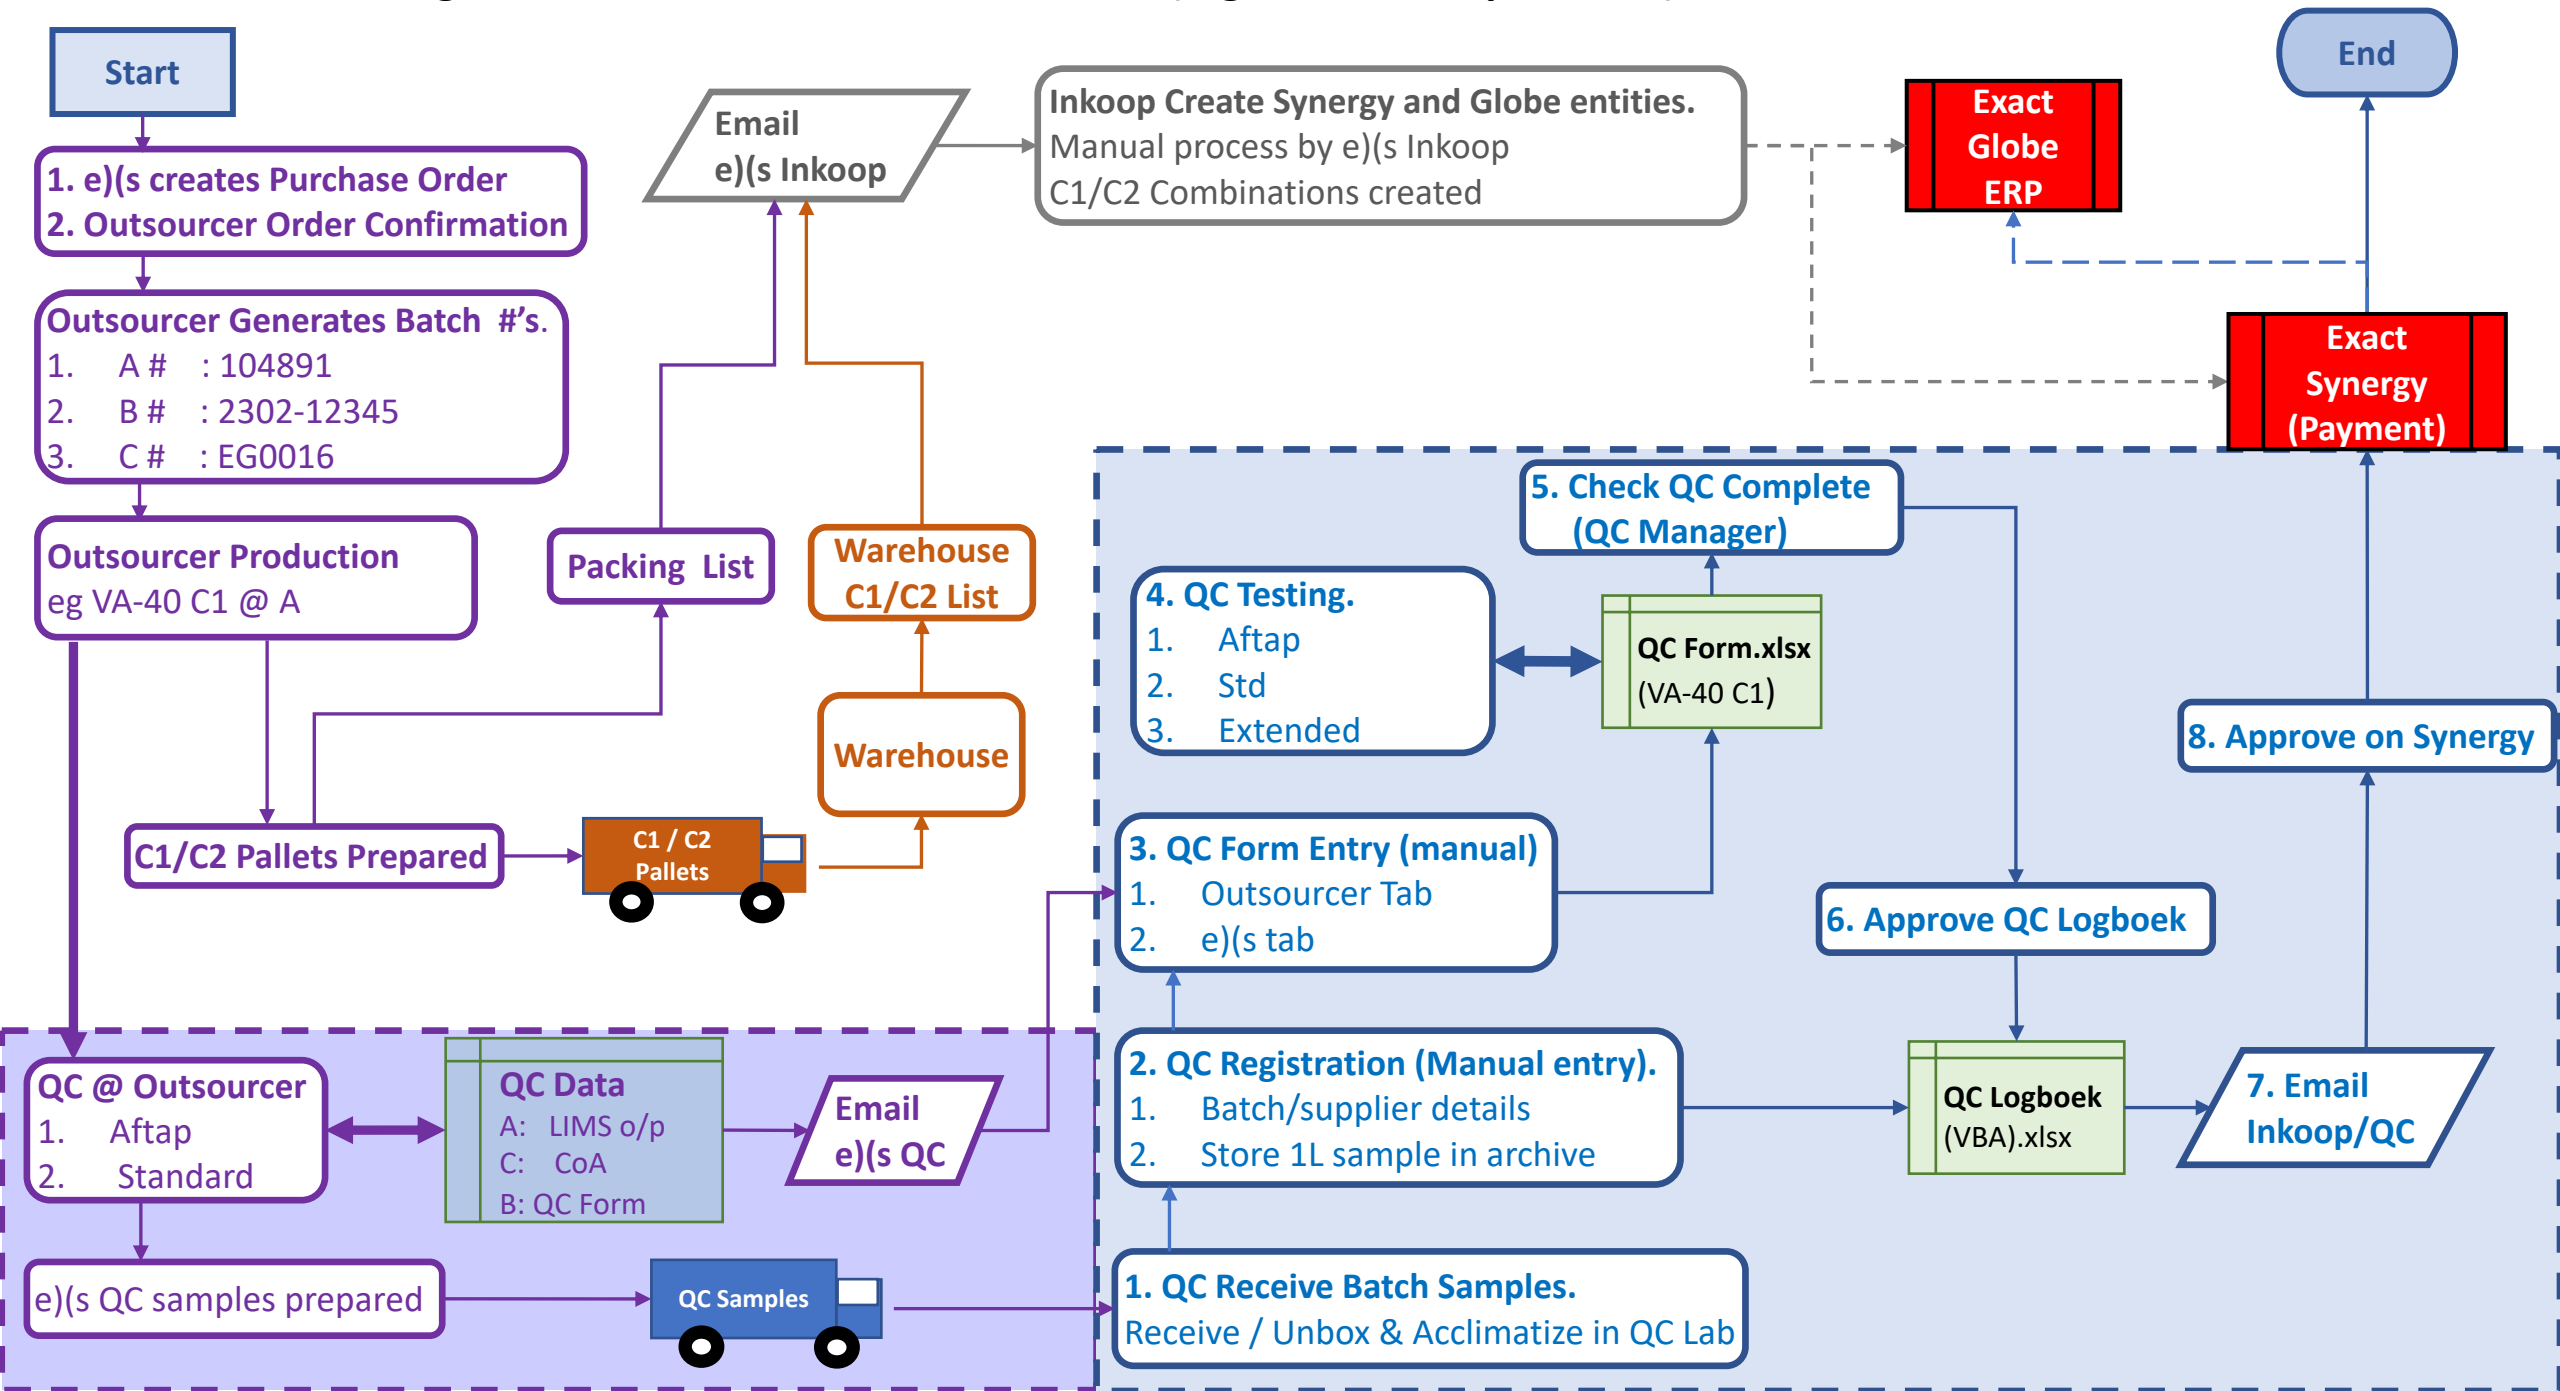

3) Trade Goods (VH) - Certificate Based QC

Filler Blocks, Wedges, Shims,

In total > 500 QC Forms!

In 2020 we closed Haarlem Production and shifted strategy to using Tolling Manufacturers for production of Chemical Products.....

1. Chemical Processing : Current Process General QC Flow (e.g. VA-60 Component 1)

3. Challenges in QC

- The volume of QC testing in Haarlem is reducing, but the strain of data management increases.
- Haarlem QC is a small department of 3.
- It is impossible to feedback the outcome of testing to all suppliers.
- “No news becomes Good News”
- Everyone wants to know the Approval Status of “their” product!

Suppliers, Purchasing, Finance, Logistics and Sales.

- The time to introduce a LIMS system had come.
- AlisQI was selected and a Business Case proposed.

For VP products alone, a 20% of one FTE was predicted.

- Onboarding began in July 23, with the focus on Outsourced Chemical QC.

4. Chemical Analysis Set

Owner: Malcolm McLean

Outsourced Chemical Products (VP) by Tolling Manufacturer

	Corkelasts	Jointelasts	Primers	Dex
Producer A	VA-40 - C1 VA-60 - C1 VA-70 - C1 VA-90 - C1	VA-60 DB EBA - C1 M-95 - C1 TO - C1	PU Extra 15 - C1 STP-25 - C1 STP-25 - C2

Producer D				Dex-K 2k Dex-L 2k tix

Highlights

- 38 x Excel Forms > 1 x AlisQI Analysis Set.
- Viscosity & Pot Life checks automated (Next Slide).
- More efficient batch Approvals.
- Visible **Status** for all users to see.
- Counter to help Haarlem sampling frequency.
- Internal & External Specifications introduced.
- Standardised units across all supplier data.
- Quick and easy access to trend data.
- Tools to analyse the data & improve processes.

5. Automating Viscosity & Pot Life Checks

Viscosity & Pot Life are temperature dependant & Specifications are difficult to apply.

In excel, it was inefficient looking for the result to approve within a cloud of data.

5. Automating Viscosity & Pot Life Checks

AlisQI Solution

ensity Tests M083 Viscosity Test

Batch#	Visc Spindle $f(x)$	Viscosity (M083) mPa.s	Temp-V (C1) °C	Specifications Viscosity $f(x)$	Viscosity Deviation $f(x)$	Viscosity in spec? $f(x)$
230246	R/6/10	37,200	24.8	31400 - 41400 - 51400	-4,200	OK
230245	R/6/10	29,900	29.1	24850 - 34850 - 44850	-4,950	OK
230243	R/6/10	47,700	21.1	35000 - 45000 - 55000	2,700	OK
230242	R/6/10	41,900	23.1	34800 - 44800 - 54800	-2,900	OK
230240	R/6/10	37,900	24.7	31600 - 41600 - 51600	-3,700	OK
230239	R/6/10	41,800	22.7	35000 - 45000 - 55000	-3,200	OK
230074	R/6/10	38,700	24.2	32600 - 42600 - 52600	-3,900	OK
230073	R/6/10	35,200	23.7	33600 - 43600 - 53600	-8,400	OK
230071	R/6/10	36,300	31.2	21700 - 31700 - 41700	4,600	OK
230070	R/6/10	30,600	28.1	26350 - 36350 - 46350	-5,750	OK
230068	R/6/10	39,500	27.5	27250 - 37250 - 47250	2,250	OK
230067	R/6/10	30,200	29.9	23650 - 33650 - 43650	-3,450	OK

- Measured Temperature is compared against a separate analysis set, which creates the Viscosity Specifications at 0,1 °C intervals.

- 'Viscosity Deviation' allows an SPC trend to be introduced to compare the measured viscosity versus the mid-spec value.

6. External User Accounts

- The data from our partners is **our** data and also required for our Customers.
- One of the key selling points of AlisQI for edilon)(sedra was the flexibility of the system and the provision of User Accounts.
- It provides a route for data to be directly entered by our partners "Correct first time".

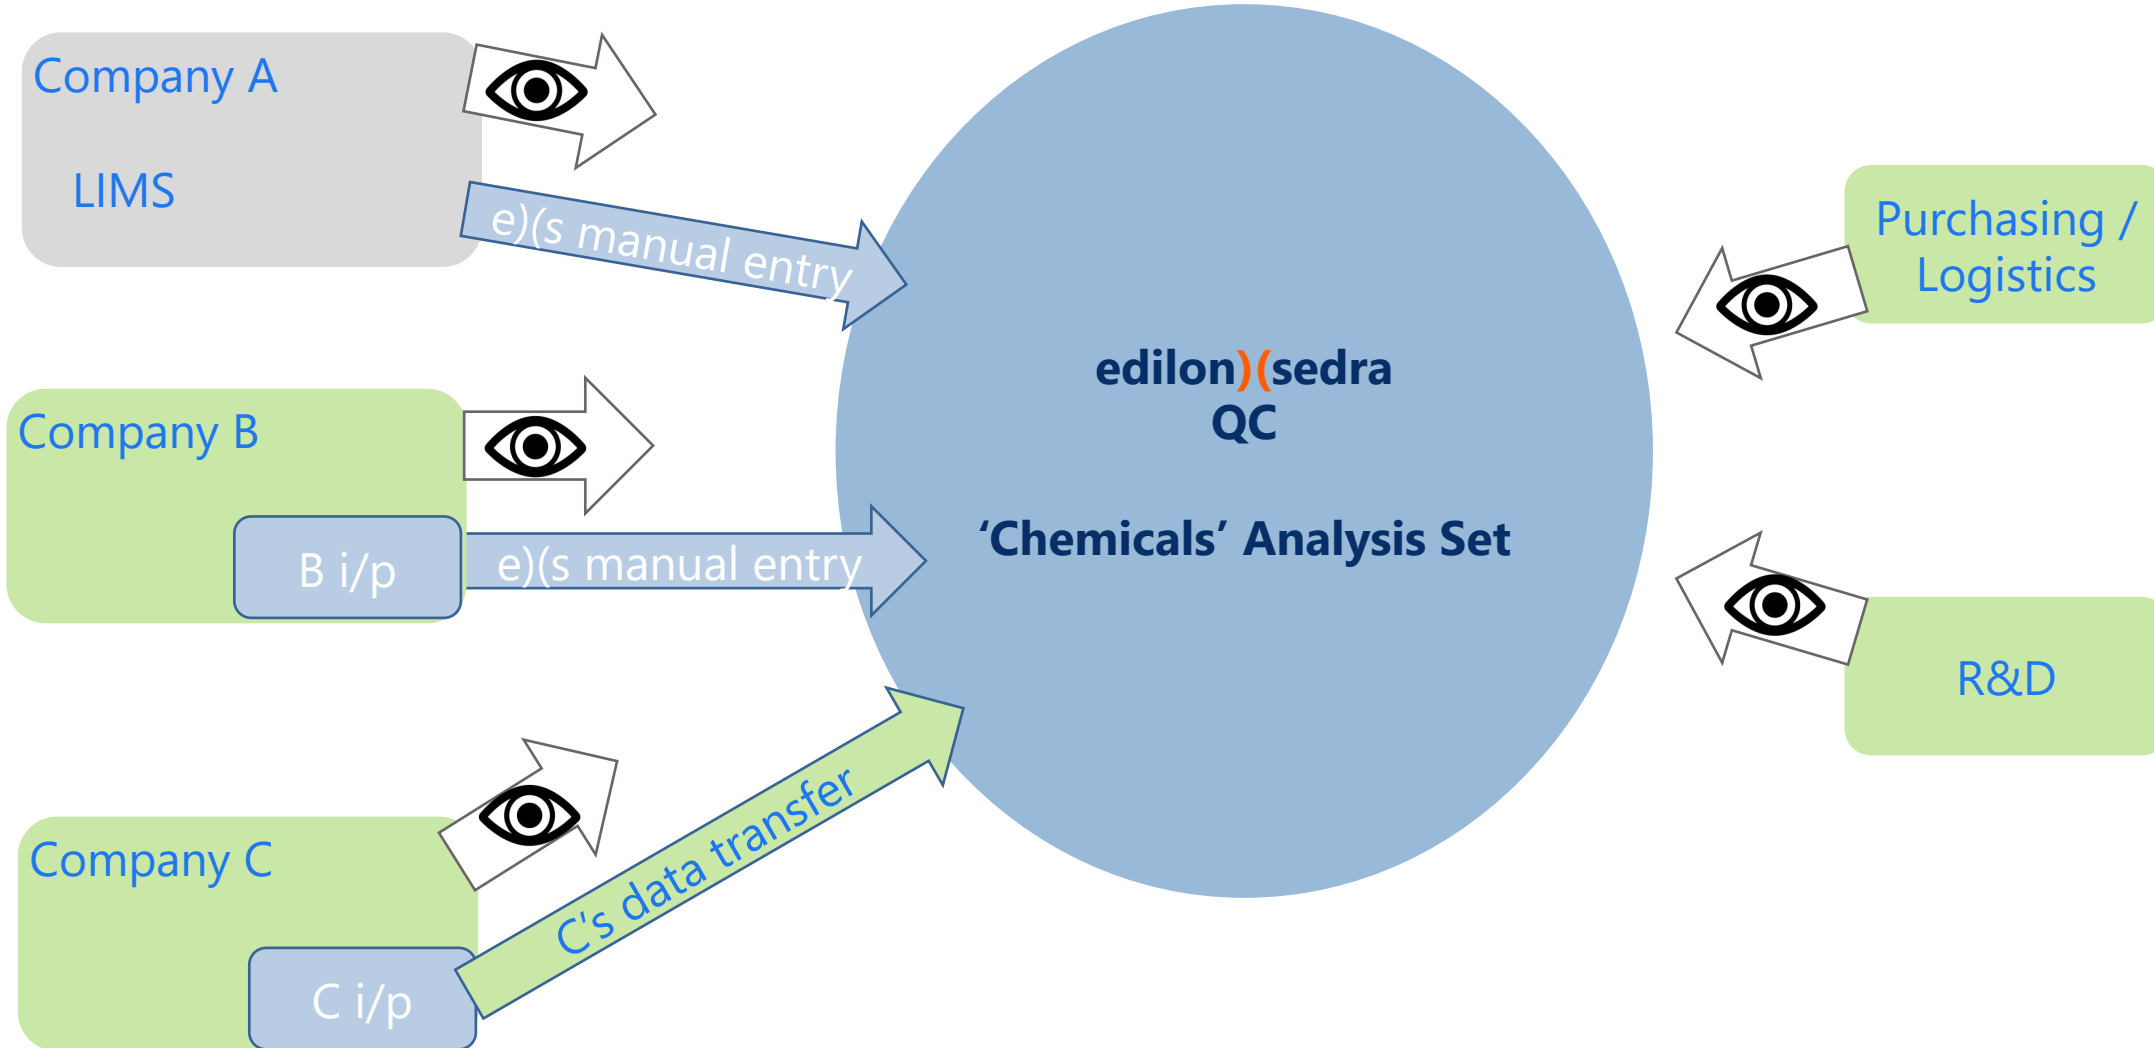

Challenges

- How to manage Read & Write privileges of outsourcers within an analysis set.
- The models home page has been disabled for our partners.
- Emailing data within customer accounts has been disabled.
- Introducing AlisQI to our partners.

Solutions

The next two slides describe how we are implementing this.

6. AlisQI Customer Accounts – Chemical Partners

6. AlisQI Customer Accounts – RPU Foams

7. Cost of Quality @ edilon)(sedra

- Scrap is low cost for us – If a product is OoS, we will find an alternative solution.

Real Cost Benefits to edilon)(sedra.

- The business data remains 'protected' but is now visible to interested colleagues.
- Our relationship with our business partners will improve with a shared data platform.
- We have immediate access to process trends and capabilities.
- We now have better tools to analyze our processes, to make informed decisions and act on them.
- An improved QC process leads to better On-Time delivery to our Customers.
- ~40% of the QC Managers Time is free'd up from Approval administration.
- Significant reduction in the time involved to find specific data.

8. The Future

A special thanks to all those involved in making AlisQI our QC system.

The work continues....

- QC Lims Specialist position created.
- Continue to develop the good foundations laid.
- Implement a Re-Vamped Calibration System into AlisQI
- Introduce API integration for Outsourcer A to realise a Lims – Lims transfer.
- Develop and Automate our Certificate of Analysis process for our customers.

edilon)(sedra

Thanks

Malcolm McLean

The screenshot displays the 'AlisQI Feature requests' page. At the top, there's a navigation bar with 'NEWS', 'FEATURE REQUESTS', and 'ROADMAP'. Below this is a search bar and a 'Sort by MOST VOTED' dropdown. The main content area shows two feature requests, both marked as 'UNDER REVIEW'. The first request, 'Add more selection based fields', has 18 upvotes. The second, 'Manage permissions per field, not only per set', has 17 upvotes. On the right side, there is a 'Suggest a feature' form with a title field, a details field, and a 'SUBMIT' button.

18 **Add more selection based fields**
● UNDER REVIEW
Currently you can use the field visibility option to only show certain fields based on a selection (from a required index field). It is only possible to do this once per analysis set. It would be nice to add more of these selection based fields in one analysis set.

17 **Manage permissions per field, not only per set**
● UNDER REVIEW
Currently the AlisQI permission management works on the analysis set level. However, for some cases it might be beneficial to restrict access to fields. This would allow users to assign sections of an analysis set to particular user group. This would provide a better guidance on what they can see, and limit unwanted behavior regarding changing result values.

Demo time

What's next?

Use case areas

**Quality Control
& SPC**

Document Management

**Continuous
Improvement**

**Environment,
Health & Safety**

**Supply Chain
Quality**

Quality Control & SPC

Insights into your product and process quality.

What's next?

- More configurability
- Conditional behavior in data entry forms.
- Worklists

Document Management

Quality Manuals people use.

What's next?

- Automatically highlight changes between subsequent versions
- Insight in document read time
- Improved read & understand flow

Continuous Improvement

Data driven follow-up on process and product deviations.

What's next?

- Improve Root Cause Analysis
- R&D: Similar incidents & proposed actions

Environment, Health & Safety

Registration, follow-up and analysis.

- Emissions management
- Hazardous Material management
- Incidents & follow-up
- Audits & inspections
- Management of Change
- Risk assessment

Supply chain Quality

Engage supply chain partners in your quality management operations.

- Supplier onboarding, management & score carding
- Toll manufacturing
- Guest users & supplier portal
- Access restrictions

Do It Yourself

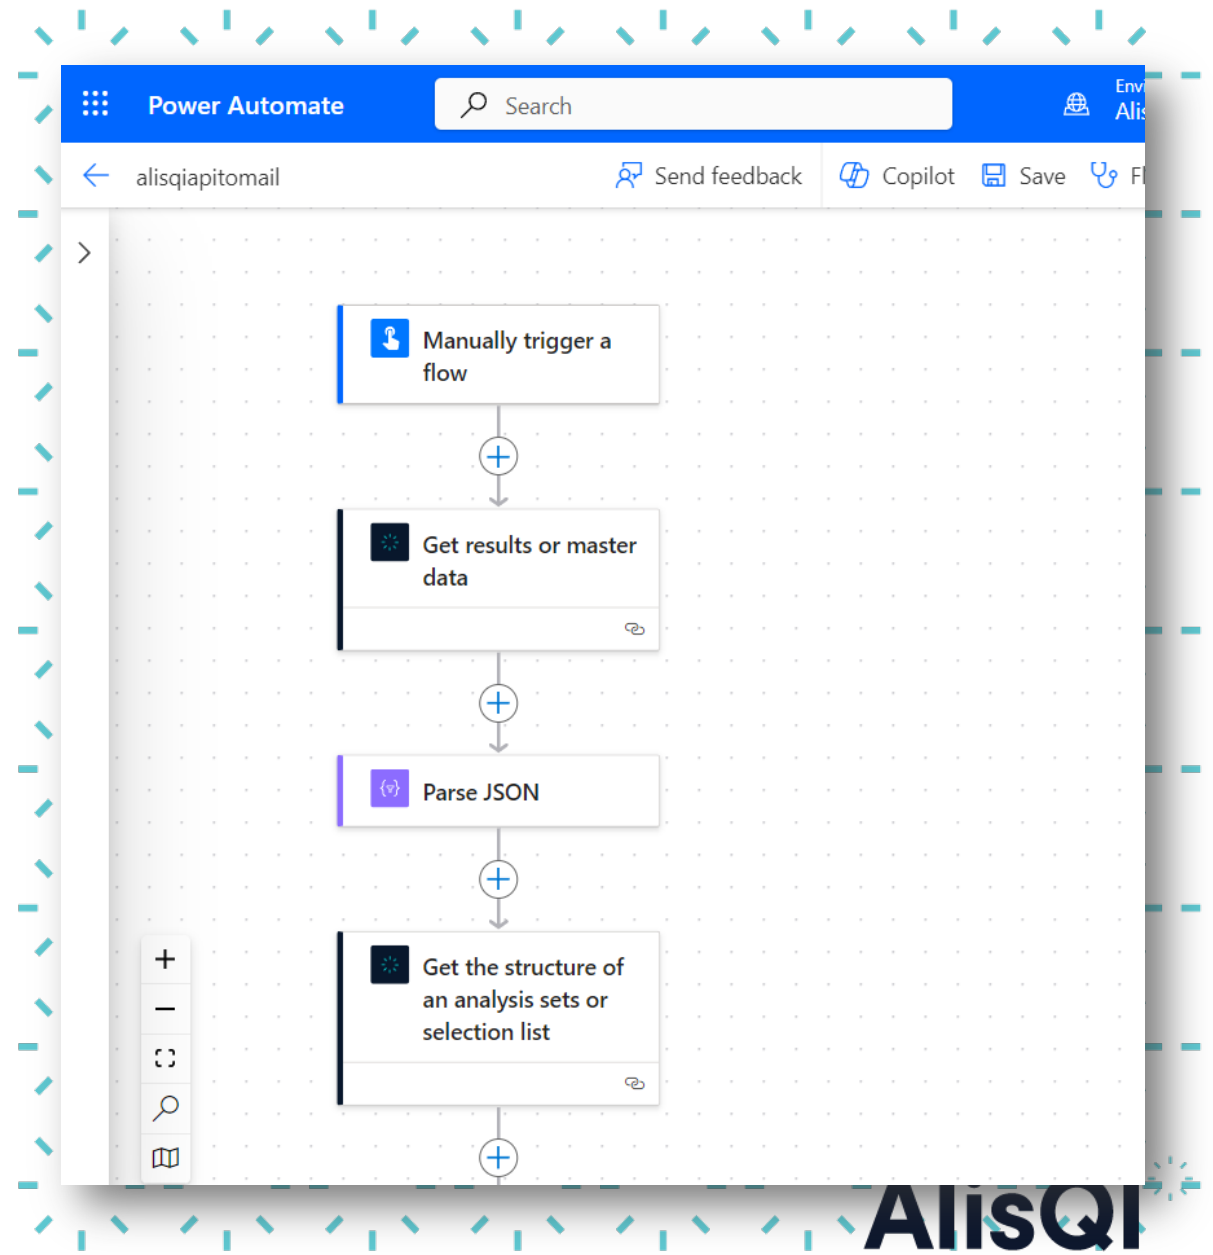

Ready to use

AlisQI 

Power Automate Connector

under review 

Artificial intelligence

- **Keeping it real**
- **SPC is AI avant la letter**
- **R&D: Propose CAPA actions**
- **R&D: Extract data from PDF**
- **R&D: Dry run audit**
- **R&D: Assess readability of SOPs**

**Excited
times
ahead!**
